

11. Postscript

Here we could summarize the project result of TENORM Task Group's activity under Radioactive Waste Management (RWM) Project of FNCA.

On NORM/TENORM, radiation protection principles are summarized in this report based on ICRP and IAEA. The figures of on site use of these materials are summarized depending on the using conditions. The recent activities of Japanese Radiation Council; based on NORM/TENOTRM categorization, are shown as a real example of categorization. The case study is also expanded for the discussion of the applicability. The discussion items and the flow toward the NORM/TENORM solution are also developed.

The authors are expecting this information will be widely used for implementation of practical radiation protection for NORM/TENORM.

March 2005
